# The path to Quantum Resistant Secure Comms

---

**Post-Quantum Cryptography Conference**

October 28-30, Kuala Lumpur, Malaysia

**Jonathan Jackson**

Senior Director, PQC Solutions, BlackBerry Malaysia

# Why Act Now on Quantum-Safe Security?

## What's the fuss all about?

- Today's encryption (RSA/ECC/DH) is **not future proof** for the long term
- Though large-scale quantum computers capable of executing these algorithms are still in development, **the risk is not theoretical**. Experts predict that such machines could be viable in the next **5-10 years** (by the 2030s).
- Adversaries are intercepting and storing encrypted data (which cannot be read today) in hopes of decrypting it in the future — the so-called **"harvest now, decrypt later" HNDL** strategy.
- This especially threatens information that needs long-term confidentiality: **national security intel, personal healthcare records, intellectual property**, etc.

# PQC Timeline Requirements

*“Every organization managing information technology (IT) systems must migrate cyber security components to become quantum-safe”* - Canadian Centre for Cyber Security

## Canadian Centre for Cyber Security

Communications  
Security Establishment  
Canada

Milestones and deliverables for federal departments and agencies are as follows:

- April 2026: Develop an initial departmental PQC migration plan
- Beginning April 2026 and annually after: Report on PQC migration progress
- End of 2031: Completion of PQC migration of high priority systems
- End of 2035: Completion of PQC migration of remaining systems

## NIST

Transition to Post-Quantum Cryptography Standards - migration phases and deadlines:

- **Now to 2030:** Begin phasing out quantum-vulnerable encryption like RSA and ECC, and start piloting post-quantum cryptography in parallel with existing systems.
- **By 2030:** All 112-bit security algorithms (e.g., RSA-2048, ECC-256, DH) should no longer be used in new systems.
- **By 2035:** Fully complete migration to PQC and have quantum-vulnerable algorithms retired from all production systems, in step with public mandates (such as NSM-10).

**By 2026:** Initial national PQC transition roadmaps have been established by all Member States.

**By 2030:** The PQC transition for high-risk use cases has been completed.

**By 2035:** The PQC transition for medium-risk use cases has been completed.

## National Cyber Security Centre

The key milestones are:

- ▶ **By 2028**
  - Define your migration goals
  - Carry out a full discovery exercise (assessing your estate to understand which services and infrastructure that depend on cryptography need to be upgraded to PQC)
  - Build an initial plan for migration
- ▶ **By 2031**
  - Carry out your early, highest-priority PQC migration activities
  - Refine your plan so that you have a thorough roadmap for completing migration
- ▶ **By 2035**
  - Complete migration to PQC of all your systems, services and products

# How many logical QuBits will be needed to break RSA-2048 encryption?

Between 4096, to around 1000, depending on who you believe.

# The path projection to 1600 Logical QuBits – June 2025

## IonQ Roadmap for Large-Scale, Fault-Tolerant Quantum Computers

Built on pioneering trapped ion research, IonQ's roadmap is enabled by the nearly 1,000 patented hardware and software breakthroughs that were developed at IonQ integrated from strategic acquisitions.

### Original IonQ #AQ Roadmap

2024	2025	2026	2027	2028
36 Algorithmic Qubits	64 Algorithmic Qubits	256 Algorithmic Qubits	384 Algorithmic Qubits	1,024 Algorithmic Qubits

### Updated Technology Development Roadmap

2024	2025	2026	2027	2028	2029	2030
<b>36+</b> Physical Qubits <b>99.96%</b> Physical Qubit Fidelity  All-to-All Connectivity Optical Gate Operations 1D Qubit Array	<b>64-100+</b> Physical Qubits <b>99.99%</b> Physical Qubit Fidelity  All-to-All Connectivity Microwave Gate Operations 2D Qubit Array Mid-Circuit Measurement Parallel Operations	<b>100-256+</b> Physical Qubits <b>99.99%</b> Physical Qubit Fidelity  12 Logical Qubits <b>&lt;1.00E-7</b> Logical Error Rate  All-to-All Connectivity Microwave Gate Operations 2D Qubit Array Mid-Circuit Measurement Parallel Operations	<b>10,000</b> Physical Qubits <b>99.99%</b> Physical Qubit Fidelity  800 Logical Qubits <b>&lt;1.00E-7</b> Logical Error Rate  All-to-All Connectivity Microwave Gate Operations 2D Qubit Array Mid-Circuit Measurement Parallel Operations	<b>20,000</b> Physical Qubits <b>99.99%</b> Physical Qubit Fidelity  1,600 Logical Qubits <b>&lt;1.00E-7</b> Logical Error Rate  All-to-All Connectivity Microwave Gate Operations 2D Qubit Array Mid-Circuit Measurement Parallel Operations	<b>Commercial Quantum Computers</b> <b>200,000</b> Physical Qubits <b>99.99%</b> Physical Qubit Fidelity  8,000 Logical Qubits <b>&lt;1.00^+12</b> Logical Error Rate  All-to-All Connectivity Microwave Gate Operations 2D Qubit Array Mid-Circuit Measurement Photonic Interconnect Parallel Operations	<b>Commercial Quantum Computers</b> <b>2,000,000</b> Physical Qubits <b>99.99%</b> Physical Qubit Fidelity  80,000 Logical Qubits <b>&lt;1.00^+12</b> Logical Error Rate  All-to-All Connectivity Microwave Gate Operations 2D Qubit Array Mid-Circuit Measurement Photonic Interconnect Parallel Operations

# The 80/20 Rule

The path to PQC is 80% about **Process and People**, and only 20% about **Technology**

# PQC Migration Planning - 5 Domains

## Risk Assessments

Identify and prioritise your key assets

## Governance

Establish a coordinated and sustainable plan across the organisation

## Technology

Guide the implementation steps and considerations to execute migration

## Training & Capability

Develop the knowledge and competencies needed for migration

## External Engagements

Work with vendors and ecosystem partners to drive migration

# PQC Roadmap - Post-Quantum Cryptography Coalition (PQCC)

# Crypto Agility

What does it actually mean? (or Hybrid Crypto)

# BlackBerry Secure Communications Focus Areas 2025/26

## Protect Conversations & Identities

- Prevent Eavesdropping Attacks & Conceal Patterns of Life
- Secure Mobile Device Use
- Verify Identities Cryptographically

### Why it Matters:

Surveillance and cyber threats are evolving, and securing every layer is critical.

## User Experience

- Needs to be lightning fast
- Should show PQC Compliance
- Requires Collaboration Globally

### Why it Matters:

In a PQC world, the end user experience should not be impacted. Security and cryptographic controls need to be seamless and invisible.

## Sovereign Control & Compliance

- Sovereign On-Prem Control in Malaysia
- Centralized Management
- Government-Validated Certifications

### Why it Matters:

If you don't control your infrastructure, you don't control your security.
